DATA NOTES

Annualized rates can be viewed with either log annualization or the simple geometric formula. The same toggle also switches Q4/Q4 and y/y between log change and the standard simple percent-change convention.

Q4/Q4 uses Q4 average levels rather than a single December reading, which reduces month-specific noise.

FRED/ALFRED drive the headline and core series, while official Dallas Fed, Cleveland Fed, and BEA underlying-detail releases drive the additional underlying-inflation measures. The added core inflation measures follow the source list from Wright's NBER paper.

Wright/NBER paper

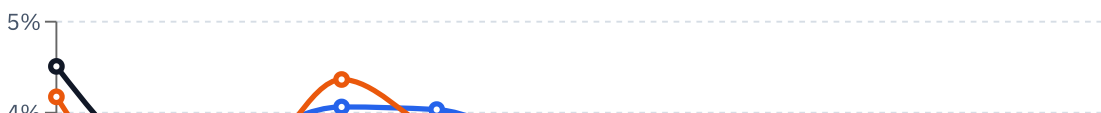

Headline PCE: NSA mirror unavailable in FRED, so y/y uses SA data.

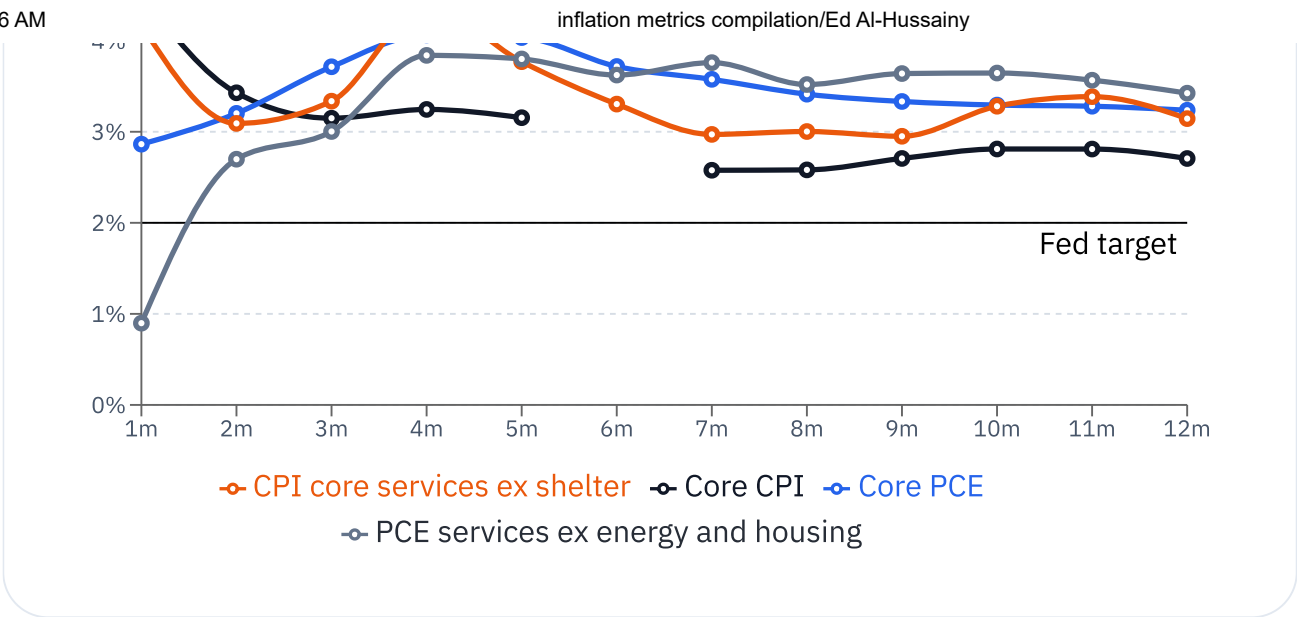

CORE ANNUALIZED PROFILE

Core inflation measures, 1m to 12m annualized

The chart shows the latest 1-to-12 month annualized readings for core CPI, core PCE, CPI core services ex shelter, and PCE services ex energy and housing using the **log** formula setting.

Aligned observation month: **Apr 2026**

FOMC PROJECTIONS

Core PCE Q4/Q4: three realized years and FOMC median projections

Federal Reserve SEP • released March 18, 2026

Year	Measure		Core PCE Q4/Q4
2023	REALIZED	BEA/FRED realized core PCE	3.29%
2024	REALIZED	BEA/FRED realized core PCE	2.99%
2025	REALIZED	BEA/FRED realized core PCE	2.85%
2026	FOMC MEDIAN	Federal Reserve SEP median projection	2.70%
2027	FOMC MEDIAN	Federal Reserve SEP median projection	2.20%
2028	FOMC MEDIAN	Federal Reserve SEP median projection	2.00%

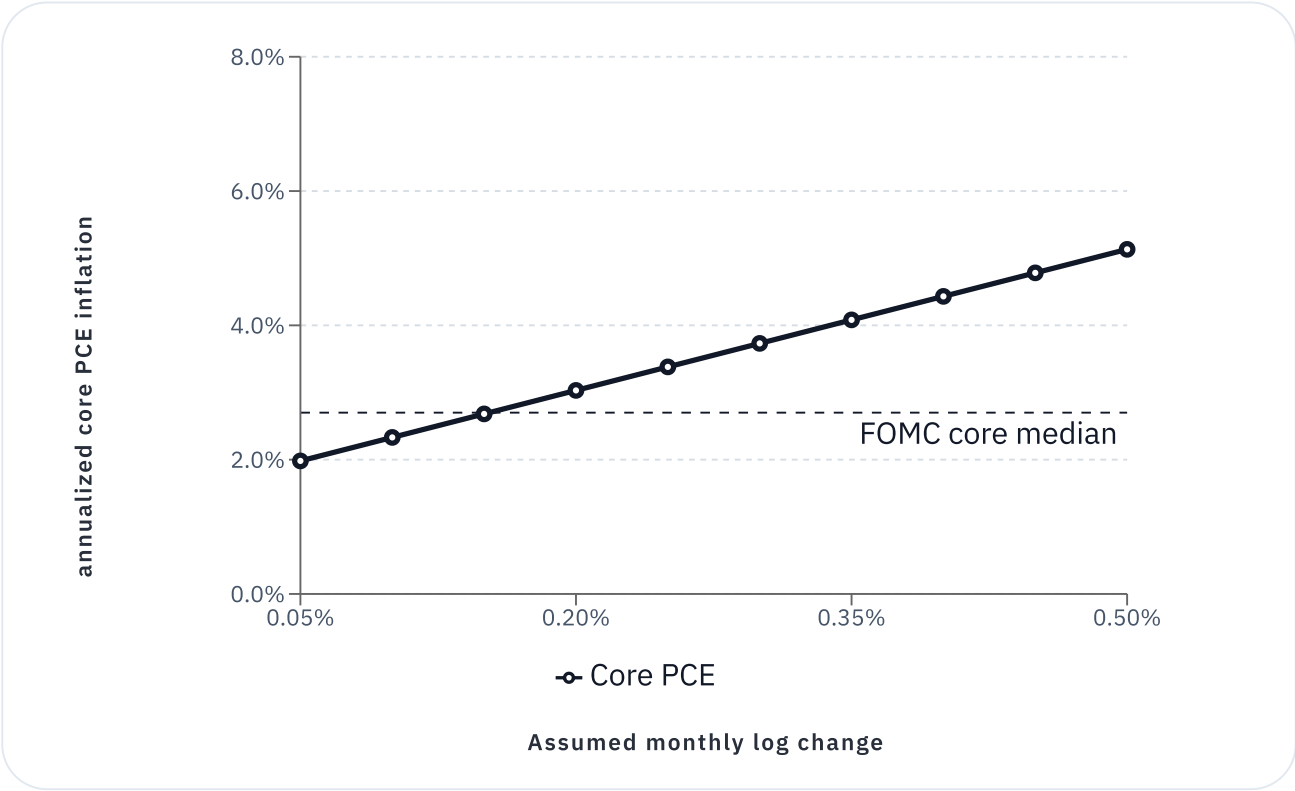

Realized values are standard percent changes in the Q4 average core PCE price index versus the prior Q4 average. The Federal Reserve SEP defines the projection values as Q4/Q4 percent changes for the indicated calendar year.
